

drivegrid

Stonemarket's superior Drivegrid System includes a high quality, premium grid that holds and stabilises gravel driveways and paths, a Geotextile to help in the prevention of weed growth and a choice of natural landscaping stone.

When laid on a permeable sub base, the rainwater will run through the cells and into the ground below helping to reduce flood risk and removing the need for planning permission.

A choice of Cinder Black and Golden Blend 6-10mm landscaping stone makes this system perfect for any traditional or contemporary scheme.

- Pack coverage allows 10mm of gravel above height of Drivegrid
 - Drivegrid with introduced chosen aggregate (or 6-10mm sharp angular gravel)
 - 20mm screeded layer of 6mm clean sharp angular gravel
 - Geotextile layer
 - 100mm layer of 20mm clean sharp angular gravel/stone vibrated lightly with a single pass, achieve your levels here
 - Subsoil
- Grid, grid infill aggregates and Geotextile are all included in the system

drivegrid system

	m ² per pack	kg per pack	colours
Drivegrid project pack	11.76	850 + 80*	Golden Blend, Cinder Black

*Project pack comes as a bulk sack of 6-10mm landscaping stone containing 850kg (nominal) and a palette containing 2.25m x 6m Geotextile and 108 no. 330 x 330 x 40mm black stabiliser grids

All coverages have been pre-calculated so that one bulk bag of 6-10mm landscaping stone is the correct amount for one pack of Drivegrid.

It is essential that the laying advice on page 150 is followed. If in doubt contact the Stonemarket Technical Helpline on 0345 302 0603
